DETAILED ACTION

Drawings

1. Figure 15 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it's lengthy and imprecise.

Correction is required. See MPEP § 608.01(b).

Art Unit: 2634

4. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

5. Claim 1 is objected to because of the following informalities:

On line 4, word: "decodes" should be changed to --decodes--.

Appropriate correction is required.

Claim Objections

6. Claims 5, 6, and 7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim of 1, 2, and 3. See MPEP § 608.01(n). Accordingly, the claims 5, 6, and 7 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-4 and 8-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant admitted prior art (AAPA) in view of Choi (5,999,349).

- a) Regarding claims 1-4 and 8-22, AAPA disclose a waveform equalizer comprising:
an equalizing filter unit including a delay circuit with a tap;

a discriminator which decodes an output signal of said equalizing filter unit; and
tap arrangement control means which controls a tap arrangement of said
equalizing filter unit (Fig. 15; Page 1, L16 - Page 2, L8).

AAPA discloses all of the subject matter as described above except for
specifically teaching of a tap coefficient monitoring unit.

Choi, in the same field of endeavor, teaches a Coefficient Updating Circuit (270
in Fig. 2) coupled with a Data and Coefficient Value Analyzing Device (300 in Fig. 2),
which is shown in details in Fig. 3, to provide new tap coefficients using the
predetermined initial tap coefficients from the selection circuit (350 in Fig. 3; Col 4, L60-
Col 8, L23).

By providing new tap coefficients would optimize the tap arrangement.
Therefore, it would have been obvious to one of ordinary skill in the art at the time of the
invention to employ the combination of coefficient updating circuit with the data and
coefficient analyzing device taught by Choi in the waveform equalizer by AAPA. By
doing so, the waveform equalizer has better performance while transfer path varies and
improve multipath fading problems.
